SUMMARY

4 years of applied GenAI work: fine-tuning, retrieval research and agent prototypes. Strong on model behaviour and evaluation, lighter on cloud operations.

SKILLS

Languages: Python

AI / LLM: Transformers, LoRA, QLoRA, DPO, RAG, LangChain, LangGraph, Ragas

Retrieval: FAISS, ColBERT, hybrid BM25 + dense retrieval

Tooling: PyTorch, HuggingFace, Weights & Biases, vLLM

Other: Docker (basic), Git

PROFESSIONAL EXPERIENCE

Applied Research Engineer - Aeon AI Labs (Jun 2022 - Present)

- Fine-tuned Llama-3 8B with QLoRA for a legal-summarisation task; beat the zero-shot baseline by 14 ROUGE-L points on an internal set.
- Prototyped a LangGraph research agent that plans, searches and writes literature reviews; ran as an internal demo, not productionised.
- Built a retrieval evaluation harness with Ragas covering faithfulness and context precision across 5 chunking strategies.
- Published 2 workshop papers on retrieval-augmented summarisation.

ML Intern -> Associate Engineer - Vertex Research (Jul 2021 - May 2022)

- Trained sentence-embedding models for semantic search over patents.

PROJECTS

agentic-lit-review - LangGraph agent that decomposes a research question, searches arXiv and drafts a review. Runs locally; no deployment.

EDUCATION

M.S., Computer Science - IIIT Hyderabad, 2021
